# Release Highlights

## First Quarter 2015

Topic	Description
Detail on 529 Plans	New memo items showing households' assets held in 529 college savings plans and prepaid tuition plans are now included on the balance sheet of households and nonprofit organizations (table B.101). Additionally, table B.101 now includes a memo item for households' assets held in individual retirement accounts (IRAs), which is also shown on the pension entitlements instrument tables (tables F.226 and L.226).
Nonfinancial corporate business benchmark	Assets of the nonfinancial corporate business sector (tables F.103, L.103, B.103, and R.103) have been revised from 2013:Q1 forward, to reflect new advance data from the Internal Revenue Service (IRS) Statistics of Income (SOI) for 2013.
Nonfinancial noncorporate business benchmark	Data for the noncorporate business sector (tables F.104, L.104, B.104, and R.104) have been revised from 2011:Q1 forward to reflect the 2011 and 2012 benchmark statistics from the Internal Revenue Service (IRS) Statistics of Income (SOI).
FEDS Notes	The following FEDS Notes have recently become available: "Defined-Contribution Pension Plans for State and Local Government Employees in the Financial Accounts of the United States" (Matthew Hoops, Irina Stefanescu, and Ivan Vidangos), "Deleveraging and Recent Trends in Household Debt" (Ivan Vidangos), and "The Federal Reserve's Overnight and Term Reverse Repurchase Agreement Operations in the Financial Accounts of the United States" (Ralf R. Meisenzahl). FEDS Notes are available on the Federal Reserve Board's website at <a href="http://www.federalreserve.gov/econresdata/notes/feds-notes/default.html">www.federalreserve.gov/econresdata/notes/feds-notes/default.html</a> .
Seasonally unadjusted NIPA flows for non-government sectors	In 2007, BEA discontinued producing seasonally unadjusted flow data for non-government NIPA series. Later historical revisions to the seasonally adjusted time series made the previously recorded unadjusted flow series out of date. To align the Financial Accounts data for these NIPA series with that published by BEA, we have recalculated the quarterly rate unadjusted flow component to equal the seasonally adjusted annual rate flow series published by BEA, divided by four.
New series mnemonic two-letter prefix	The two-letter prefix on level series mnemonics for real estate have been changed from "FL" to "LM" to signify that these series are recorded at market value. At this time, the mnemonics of calculated series that include components with mixed valuation have not been changed. Work to update the mnemonics of other market value series is ongoing.
Expansion of international data submissions	The "International Data Submissions" page of the "Financial Accounts Guide" includes two new tables and SDMX files for the U.S. Public Sector Debt statistics for general government and central government. These data are disseminated for the joint use of the World Bank, the International Monetary Fund, and the Organisation for Economic Co-operation and Development.

# Explanatory Notes

## Financial Accounts of the United States

The Statistical Release Z.1, “Financial Accounts of the United States,” is organized into the following sections:

- Matrices summarizing flows and levels across sectors, and tables summarizing credit market borrowing, gross domestic product (GDP), national income, saving, and so on
- Flow of funds, by sector and by financial instrument
- Levels of financial assets and liabilities, by sector and by financial instrument
- Balance sheets, including nonfinancial assets, and changes in net worth for households and nonprofit organizations, nonfinancial corporate businesses, and nonfinancial noncorporate businesses
- Supplementary tables providing additional detail on selected sectors
- Integrated Macroeconomic Accounts

The Integrated Macroeconomic Accounts (IMA) relate production, income, saving, and capital formation from the national income and product accounts (NIPA) to changes in net worth from the “Financial Accounts” on a sector-by-sector basis. The IMA are published jointly by the Federal Reserve Board and the Bureau of Economic Analysis and are based on international guidelines and terminology as defined in the System of National Accounts (SNA1993, revised in 2008).

Federal Reserve Board staff have taken many steps over the past several years to conform the “Financial Accounts” with the SNA guidelines. Nonetheless, a few important differences remain. In particular, in the “Financial Accounts”:

- The purchase of consumer durables is treated as investment rather than as consumption.
- Nonfinancial noncorporate businesses (which are often small businesses) are shown in a separate sector rather than being included in the household sector.
- Most debt securities are recorded at book value rather than market value.

## Concepts of Level and Flow in the SNA and the Financial Accounts

The level of an asset or liability (also referred to as the stock or outstanding) measures the value of the asset or

liability in existence at a point in time. In the “Financial Accounts,” the levels are reported as of the end of each calendar quarter. In the SNA2008, the change in the level from one period to the next is called the “economic flow,” and can be decomposed into three broad elements: *transactions*, which measure the exchange of assets; *revaluations*, which measure changes in market value of untraded assets; and *other changes in volume*, which measure discontinuities or breaks in time series due to disaster losses or a change in source data or definition.

In the “Financial Accounts,” “flow of funds” refers to the exchange of assets, corresponding to the SNA definition of transactions, that is, “flow tables” in the “Financial Accounts” are equivalent to “transaction tables” in the SNA terminology. In practice, other volume changes are relatively rare, and revaluations occur only for series carried at market value (such as corporate equities and mutual fund shares), so for many series the change in the level is equal to the flow.

## Growth Rates

Growth rates calculated from levels will include revaluations and other changes in volume. To isolate the effect of transactions on growth of a given asset or liability, users should calculate the ratio of the flow in a given period to the level in the preceding period.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Growth rates calculated from changes in unadjusted levels printed in table L.2 may differ from those in table D.1.

## Seasonal Adjustment

Seasonal factors are recalculated and updated every year, and these revised factors are first published in the September release of second-quarter data. All series that exhibit significant seasonal patterns are adjusted. The seasonal factors are generated using the X-12-ARIMA seasonal adjustment program from the U.S. Census Bureau, estimated using the most recent 10 years of data. Because the effects of the recent financial crisis resulted in large outliers in some series that would have distorted the estimated seasonal factors, seasonal factors for some series were extrapolated using pre-crisis data. Seasonally adjusted levels shown in table D.3 are derived by carrying forward year-end levels by seasonally adjusted flows.

## Data Revisions

Data shown for the most recent quarters are based on preliminary and potentially incomplete information. A summary list of the most recent data available for each sector is provided in a table following these notes. Nonetheless, when source data are revised or estimation methods are improved, all data are subject to revision. There is no specific revision schedule; rather, data are revised on an ongoing basis. In each release of the “Financial Accounts,” major revisions are highlighted at the beginning of the publication.

## Discrepancies

The data in the “Financial Accounts” come from a large variety of sources and are subject to limitations and uncertainty due to measurement errors, missing information, and incompatibilities among data sources. The size of this uncertainty cannot be quantified, but its existence is acknowledged by the inclusion of “statistical discrepancies” for various sectors and financial instruments.

The discrepancy for a given sector is defined as the difference between the aggregate value of the sector’s sources of funds and the value of its uses of funds. For a financial instrument category, the discrepancy is defined as the difference between the measurement of funds raised through the financial instrument and funds disbursed through that instrument. The relative size of the statistical discrepancy is one indication of the quality of the underlying source data. Note that differences in seasonal adjustment procedures sometimes result in quarterly discrepancies that partially or completely offset each other in the annual data.

## *Financial Accounts Guide*

Substantially more detail on the construction of the “Financial Accounts” is available in the *Financial Accounts Guide*, which provides interactive, online documentation for each data series. The tools and descriptions in the guide are designed to help users understand the structure and content of the “Financial Accounts.” The guide allows users to search for series, browse tables of data, and identify links among series within these accounts. It also provides descriptions of each of the published tables and information on the source data underlying each series.

The guide is not part of the quarterly release, but it is continually updated and kept consistent with the most recently published data. The guide and the data from the “Financial Accounts” are available free of charge online:

[www.federalreserve.gov/apps/fof](http://www.federalreserve.gov/apps/fof)

Each input and calculated series in the Z.1 is identified according to a unique string of patterned numbers and letters. The series structure page of the guide provides a breakdown of what the letters and numbers represent in the series mnemonics. The relationships between different components of a series (for example, levels, seasonally adjusted annual rate flows, unadjusted flows, revaluations, other changes in volume, seasonal factors, and so on) are also described on the series structure page.

## Production Schedule

The “Financial Accounts” are published online and in print four times per year, about 10 weeks following the end of each calendar quarter. The publication and the guide are available online:

[www.federalreserve.gov/releases/Z1](http://www.federalreserve.gov/releases/Z1)

This website provides coded tables and historical annual tables beginning in 1945 that correspond with the tables published in this release. It also includes compressed ASCII files of quarterly data for seasonally adjusted flows, unadjusted flows, outstandings, balance sheets, debt (tables D.1, D.2, and D.3), supplementary tables, and the IMA.

In addition, the data are available as customizable datasets through the Federal Reserve Board’s Data Download Program at:

General notes: A = assets; L = liabilities. Domestic nonfinancial organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 23) and equity in noncorporate business (line 30). The matrix shows a discrepancy in column 17 for monetary gold (line 4) because by international accounting convention, monetary gold is a financial asset without a corresponding liability.

Estimates for 2000 and earlier periods are based on the 1987 Standard Industrial Classification System; later estimates are based on the North American Classification System.

(1) Consists of rental income of tenant-occupied housing and proprietors' income. Quasi-corporations are unincorporated enterprises that function as if they were corporations; they primarily cover their operating costs through sales, and they keep a complete set of financial records.

(2) Government-sponsored enterprises (GSEs) consist of Federal Home Loan Banks, Fannie Mae, Freddie Mac, Federal Agricultural Mortgage Corporation, Farm Credit System, the Financing Corporation, and the Resolution Funding Corporation, and they included the Student Loan Marketing Association until it was fully privatized in the fourth quarter of 2004.

(3) The statistical discrepancy is the difference between net lending or net borrowing derived in the capital account and the same concept derived in the financial account. The discrepancy reflects differences in source data, timing of recorded flows, and other statistical differences between the capital and financial accounts.

(4) Excludes land. Includes corporate and noncorporate financial business.
